

PG 6000

COCOA NIBS PRE-GRINDER

可可豆预磨机

Technical data

Installed power	200 kW
Coldwater consumption	2.5m ³ /h (15-20 °C)
Weight	4,500 kg
Dimensions	3,250x1,800x2,400 mm

技术参数：

装置电源：	200 仟瓦
冷却水：	2.5 米 ³ /时 (15-20°C)
设备净重：	4,500 公斤
设备尺寸：	3,250 x 1,800 x 2,400 毫米

PG 6000

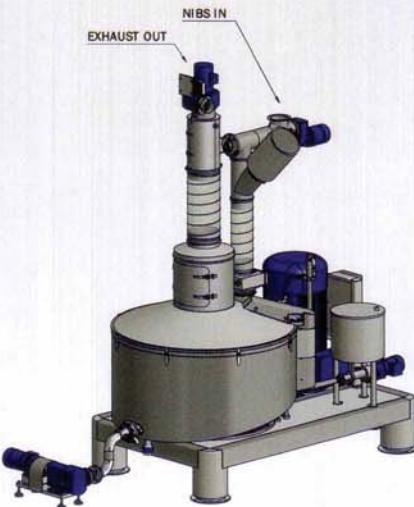

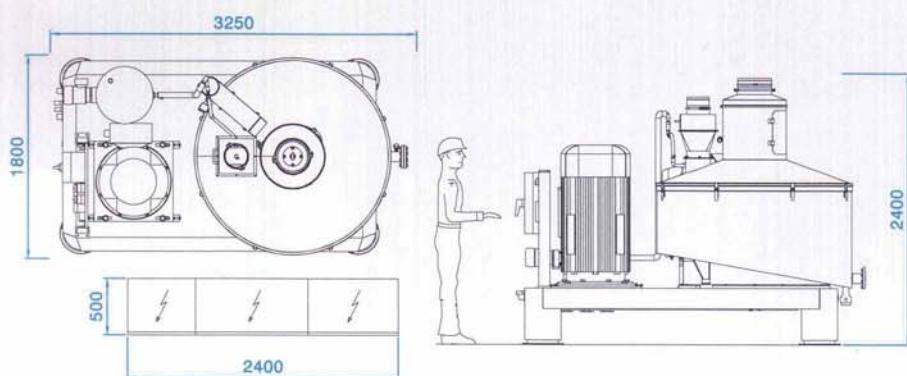

The beater blade mill, type **PG 6000**, is specially developed for the continuous pre-grinding of high fat content seeds and nuts e. g. cocoa nibs and/or hazelnuts.

This beater blade mill, a high speed design, has a unique configuration between beater blades, milling chamber and slotted sieve giving optimum continuous pre-grinding.

The combination of high speed and impact between the beater blades and seeds/nuts breaks the product. The fat released from the fibres of the product liquefies the product, and the resultant mass leaves the milling chamber through the slotted sieve with the required particle size into the receptacle of the unit.

The end fineness of the finished product is determined by the gap size of the sieve through which the mass flows through by gravity to outlet of the mill. The liquor can be discharged from the unit by means of a discharge pump.

The maximum capacity of the mill is 6.000 kg/h, depending upon the type and pre-treatment of the seeds and nuts, as well as the required end product fineness. During the grinding process the moisture content of the product will be reduced.

Capacity and wet sieve residue

Sieve gap 0.15 mm Throughput Approx. 2.700 kg/h	Sieve gap 0.20 mm Throughput Approx. 3.400 kg/h	Sieve gap 0.25 mm Throughput Approx. 4.000 kg/h	Sieve gap 0.35 mm Throughput Approx. 6.000 kg/h
